

## Slip and Fall Inspection Checklist

	YES	NO	Comments
Are floors clean, dry as possible and free of holes, protrusions, and other walking hazards?			
Are passageways clear of floor obstructions, which could cause a trip and fall?			
Are floor openings, such as holes and pits, provided with covers and standard guardrails and four-inch toe boards?			
Are stair rails provided with stairs with four or more risers?			
Are all straight ladders and extension ladders provided with non-slip feet?			
Are all ladders frequently inspected on a regular basis for serviceability? Are all ladders provided with steps and rings 12 inches apart?			
Are hoses, electrical cords, telephone cords, or other obstructions positioned so they do not cross walking or work areas?			
Are custodial carts and equipment arranged in such a way so as not to create a traffic hazard?			
Are parking areas free from rocks, loose sand, debris, holes, and projections, etc. that could cause a tripping accident?			
Are entrance doors to buildings, offices and other areas in good working order?			
Is lighting adequate in all hallways, stairwells, and doorways?			
Is carpeting securely fastened to the floor, including binding strips?			
Do mats or other types of protection lie flat and free from tripping hazards?			
Are there any other areas where mats should be provided?
